JSHolsters Leather Pocket Holsters

Leather **JS Pocket Holster** for Kel-Tec P-32, Kel-Tec P3AT, Kel-Tec PF-9, Kahr PM9, NAA Guardian 380, NAA Guardian 32, Autauga 32, Seecamp 32 and Beretta Tomcat 32 guns.

JSPH-S

Our pocket holsters are crafted with the "OV Split" to allow safe purchase while still in the pocket. This also aids in quicker target acquisition as you don't have to shift your purchase on the gun after the initial draw.

The holster is designed to stay in the pocket during the draw sequence and is right or left hand specific.

We also offer a larger version (JSPH-L) for Glock 26-27-33, Kahr MK9, Springfield Sub-Compact and Taurus PT111 as well as Pocket Mag Pouches (**JSPMP**).

For the revolver folks, we have the **ROMEO-6** for small frame revolvers. We also carry speedloaders and grip extensions for various guns. All of our holsters come with a 100% guarantee; we will re-craft your order or refund your purchase price + shipping if you are not satisfied with the quality and function of your holster.

ROMEO-6

JSHolsters - KYDEX®

Hand-crafted KYDEX® holsters and accessories for Glock, M1911, Sig, Kel-Tec, Springfield XD. Handguns and SW/ Taurus 85 Revolvers.

The **JS Paddle Holster** is our flag ship (so to speak)

for KYDEX® holsters. We designed this holster as a single piece with the paddle formed *away from the body*. The result: a KYDEX® paddle holster crafted to securely hold the firearm, be comfortable to wear, aid in concealment without hindering a smooth draw or re-holstering and stand up to everyday wear and tear.

JSPDL

We employ an even cut at the bottom of the holster to allow the use of longer slides. Your color selections include Black, Sand and Gray; the holster is crafted in straight drop and forward cant.

This is our **de Bethencourt Horizontal Carrier**. The dBHC slips over the belt and locks your item in tight. The "tab" on the outside of the carrier is used to open the carrier up during the insertion of your OC, light or folding knife. The drawstroke is uninhibited by the retention of the carrier yet your items stay put during normal wear. This natural balance makes the dBHC highly useful and simple.

dBHC

Or as Michael puts it: "it's turtles all the way down".

dBHC-6: 2 oz OC canisters

dBHC-5: .75 oz OC, 1" lithium lights, folding knives

Please note: The dBHC is a package deal that consists of two carriers; one dBHC-6 and one dBHC-5

Our **JS IWB** uses a generous forward cant that is set during our molding process. The result is a holster that rides deep and leaves just enough grip to make a basic safe purchase that leads to a smooth draw.

The JS IWB is the way to play when you need concealment, comfort and unrestricted access. The bottom of the holster is cut evenly as to be useful for a wider variety of slide lengths. If you find that your IWB holster disengages a manual safety, **PLEASE RETURN THE HOLSTER** for a full refund or an exchange. In the event of a product return of this nature, we will cover the cost of shipping the return to us as well as the cost of shipping for the replacement.

JSIWB

The belt clip is a continuous mold from the body of the holster. While the holster stays put after repeated draw/reholster cycles, you may easily remove the holster by pulling slightly outward on the retaining clip just enough to clear your belt. Be careful not to pull the clip out any farther than is necessary to clear your belt. While KYDEX® is tough, it can fail under extreme stress.

Our **KYDEX® Magazine Pouches** are designed and crafted to securely hold the magazine, be comfortable to wear, aid in concealment without hindering access and stand up to everyday wear and tear. The one-piece design clips over the belt and keeps the mag pouch in place during draw strokes. The TANGO-5 has a tension screw, the SIERRA-6 is a no-hardware design that presents a smaller footprint. Please select right or left hand and the magazine type. As spare magazines are normally worn on the weak side, right hand mag pouches are crafted for wearing on the left, left hand mag pouches are crafted for wearing on the right.

SIERRA-6

TANGO-5

The **JS Tuckable Holster** is our first two-piece design and our T&E folks give us a universal thumbs up. While the holster is optimal for the smallest semi-auto frames, the bottom cut on the holster allows for the use of longer slides. Hey, if you can swing a larger frame auto, go for it.

During the molding process, we shim the retention arm to provide space for your shirt to easily slide between the holster and the "hook" arm. The "hook" is designed to ride under your belt and catch the bottom exposing only a minimal amount of KYDEX®.

JSTUCK

The JS Tuckable Holster has a sweat guard to keep the gun away from your skin (or your undershirt). Some guns with decocking or manual safety levers may require careful reholstering as the lever may catch the side of the sweat guard.

If you find that your tuckable holster disengages a manual safety, **PLEASE RETURN THE HOLSTER** for a full refund or an exchange. In the event of a product return of this nature, we will cover the cost of shipping the return to us as well as the cost of shipping for the replacement.

This is a dual purpose holster in that you can use it like a traditional IWB holster. The cant is set generously forward to allow for deep concealment as well as ready access once you clear your shirt.

The **JS TAM Holster** (Tuckable - Absolute Minimum) is a one-piece tuckable design that has only enough material to cover the trigger guard and allow for a single tension screw. The JS TAM is a no frills, get the job done tuckable holster that does not sacrifice safety or quality. If you don't mind the feeling of gun metal against your skin, this is the deep concealment holster for you.

JSTAM
